

RAVI RANJAN

Software Engineering Intern Candidate | B.Tech CSE (Artificial Intelligence)

raviranjankumar.shah843109@gmail.com | +91 6202415715 | linkedin.com/in/ravi-ranjan-a08183339

SUMMARY

B.Tech Computer Science Engineering (Artificial Intelligence) student in the 4th semester with a 7.9 CGPA, focused on software engineering, full-stack development, and Data Structures & Algorithms. Hands-on experience building MERN applications using React.js, Node.js, Express.js, MongoDB, REST APIs, JWT authentication, and Redux Toolkit. Currently strengthening DSA, algorithm design, problem solving, and production-ready backend architecture while building full-stack projects.

TECHNICAL SKILLS

Programming Languages: Java, C, JavaScript, TypeScript, Python

Frontend: HTML5, CSS3, Tailwind CSS, React.js, Redux Toolkit, Next.js, GSAP

Backend & APIs: Node.js, Express.js, REST APIs, JWT Authentication, Cookies, Middleware

Databases: MongoDB, Mongoose, DBMS Fundamentals

Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Algorithm Analysis, DBMS

Tools & Technologies: Git, GitHub, Postman, Socket.IO, API Integration

AI / Current Exposure: AI-Powered Web Applications, LangChain, RAG Concepts

PROJECTS

MERN E-Commerce Application — *In Progress*

- Building a full-stack e-commerce backend with authentication and authorization, category and product management, reviews, and shopping-cart functionality
- Implemented RESTful routes with Node.js and Express.js, MongoDB/Mongoose schemas, JWT-based authentication, protected middleware, validation, and image-upload workflows
- Designed relationships among users, products, categories, reviews, and carts, and implemented CRUD operations for core application features

AI Search Web Application — *In Progress*

- Developing a Perplexity-inspired AI search interface with React, state management, responsive UI, API integration, and AI-powered response workflows
- Exploring LangChain and RAG concepts alongside scalable full-stack architecture, integrating modern web and AI technologies

MERN Authentication System

- Built registration and login flows using Node.js, Express.js, MongoDB, JWT, cookies, authentication middleware, and protected routes
- Implemented frontend authentication state and route protection for secure user sessions

EDUCATION

B.Tech in Computer Science Engineering (Artificial Intelligence)

Bihar Engineering University | 4th Semester | CGPA: 7.9

CURRENT POSITION & LEARNING

Full-Stack / MERN Developer (Student) — Actively building production-oriented web applications while studying Data Structures & Algorithms, including recursion and backtracking, and strengthening core CS fundamentals.
